

# Having you in the hereafter

## Scenario\_part 3 The smart dust riform in Catholic religion

Religion will be affected from the augmented soul provided by smart dust.

A kind of riform will be needed inside the Catholic religion as well. Cementary, as we are used to think of it, will disappear and shortly replaced by the smart objects sourrounding us. People still will need a place for remembering their beloved ones, but this will not be a fixed architecture in which bodies are buried. It will be the Intelligent Ambient of our house, your smart clothes or whatever could interact with you giving back the presence of the dead people, in every place you are at that moment .

Also the religious practice will change and the Church will upgrade its way of making the Mess. If the Eucharist is meant to evoke Jesus last supper rapresenting his blood and his body, then it will be added with smart dust in order to give people the chance to reincarnate after dying. When you go to the Church attending the Mess, your religious faith will be implemented by the potential of the smart dust.

Even our way of praying will change. You could have smart tools such as a rosary with the smart dust sensors included in the little grains. Saying the rosary could really make you interact with the hereafter and in a way we could even get to have a kind of answer to our prays.

# Key worlds

## Scenario\_part 3 The smart dust riform in Catholic religion

**Future directions**\_upgrading Catholic religion, rise of new faith

**Building my world around**\_the Church, the Eucharist, smart tools for praying

**Who**\_catholic people, priesthood

**Why**\_to implement the idea of Eucharist with the concept of virtual reincarnation, to give people interactive way of praying

**By what**\_smart dust sensors in the Eucharist and in praying tools, such as the rosary
